

OMS & Wealth/Trading Platform UI Reference — HK/SG Private Banking (Aug 2026)

*A visual/UX reference companion to the completed feature-matrix study. Focus: what these products actually look like and how key workflows work on screen today. The most valuable deliverable is the per-vendor **Visual evidence** link lists — those are where the screens can actually be seen.*

Executive summary — the 4 UI generations in this market

The vendor shortlist splits cleanly into four UI generations, and where a vendor sits predicts almost everything about its look-and-feel:

Gen-1 "IE-era / terminal" (2005–2012 look): Dense, form-driven, monochrome-with-red/green grids; multi-window desktop clients originally built for Internet Explorer. Hundsun Ayers GTS (web/terminal), Temenos Transact securities screens, and much of the Avaloq back-office/RM Workplace live here.

Gen-2 "Bloomberg blotter" (function-key institutional): Ultra-dense dark grids, keyboard-and-command driven, `<G0>`-style navigation. Bloomberg AIM is the archetype; Charles River IMS and Broadridge/Itiviti sit adjacent (Windows-native dense blotters).

Gen-3 "modern web SaaS" (2018–2025 look): Browser-native, customizable panels, lighter palettes, exception-based dashboards, some drag-drop. Enfusion, Limina, FNZ, Avaloq Wealth/Engage, Temenos Wealth Front Office, iFAST portals.

Gen-4 "AI-native overlay" (2024+): Conversational copilots layered on top of Gen-2/3 platforms — chat sidebar + natural-language query. BlackRock Aladdin Copilot / eFront Copilot is the benchmark; Avaloq Engage/Insight virtual assistant and FNZ "advisor copilots" are early movers.

Retail brokers relevant to HK/SG (Futu/moomoo, Tiger, IBKR) sit in a distinct **Gen-3.5 "consumer-grade dense"** category — information-dense like institutional tools but with modern mobile-first polish worth borrowing. **The single biggest strategic gap: no institutional OMS on this list has shipped a natively AI-first order workflow. The AI is universally an overlay (Aladdin Copilot) or a peripheral assistant (Avaloq). That is the leapfrog opportunity.**

Per-vendor sections

1. Hundsun Ayers (GTS front-end, Alpha Broker 3.0, BOS)

UI paradigm: Gen-1 incumbent, and the deepest local footprint — Hundsun Ayers reports "a market share of over 50%, firmly ranking first" in Hong Kong, serving 250+ retail/institutional brokerage clients and connecting to 29 global securities and futures exchanges. Form-based, multi-module web/desktop client; the older GTS web client was built for Internet Explorer (login asks "normal broadband" vs "behind firewall"), [Lff](#)

with a newer HTML5/Web2.0 version now available. Utilitarian, dense, HK-convention red-up/green-down.

Key screens:

Left-menu module list: Order Input / Conditional Order / Update Order / Cancel Order / Today's Order / Trade History / Portfolio. [ayers](#)

↗

Order ticket: form with market, order type, stock code, price, qty → "Order"/"Confirm" button. Clicking a holding in Portfolio auto-fills the ticket. [Ayers](#)

↗

[ayers](#)

↗

Mobile order ticket: tabbed Buy/Sell with +/- steppers for price & quantity and a confirm dialog (per Ayers mobile user manual: "the workflow of researching a stock, adding products to watchlist and placing orders are intuitive without being overwhelming").

Order-entry flow (web): (1) Click Buy/Sell; (2) input market/order type/code/price/qty; (3) click Order;

[Ayers](#)

↗

(4) confirm dialog → submit. ~3-4 clicks. Alternatively click a Portfolio row to prefill.

Visual evidence:

<https://ayers.com.hk/demo/buysell-en.html> — Web order-entry flow with embedded JPG screenshots (order ticket + portfolio prefill).

<https://ayers.com.hk/demo/index-en.html> — Web trading system demo menu.

https://www.ayers.com.hk/download/AyersGTS_Internet_UserManual_Eng.pdf — Internet client manual (screenshots).

https://www.ayers.com.hk/download/AyersGTS_Terminal_UserManual_Eng.pdf — Desktop terminal manual (screenshots).

<https://play.google.com/store/apps/details?id=hk.com.ayers.elong.trade> — ELONG (Ever-Long Securities) white-label app; 6 screenshots.

<https://play.google.com/store/apps/details?id=hk.com.ayers.geagle.trade1> — Golden Eagle Brokerage white-label; 3 screenshots.

https://apps.apple.com/us/app/_____-ayers/id1377500524 — iOS white-label ("© Ayers Solutions Limited"), 5 screenshots.

<https://www.hundsun.com.hk/en/productAction/trading> — Vendor product page (claims "professional and intuitive interfaces", iOS/Android). [hundsun](#)

↗

Mobile: No single "AyersGTS" consumer app; ships as per-broker white-labels under Google Play namespace `hk.com.ayers.<broker>.trade` and iOS listings copyrighted to Ayers Solutions. Features: HK stock trading, streaming quotes, watchlist, Top-20 ranking, indices, IPO subscription. [Google Play](#)

↗

Low download counts and old iOS baselines suggest a dated 2010s-era feel (inference from OS baselines/install counts, not a reviewer quote).

AI pattern: None surfaced in the HK GTS front-end at time of writing (parent Hundsun markets AI in China, not in the HK UI).

2. Avaloq (RM Workbench / RM Workplace, Avaloq Engage, Avaloq Wealth)

UI paradigm: Split personality. The core banking / RM Workplace is a Gen-1/2 Windows "Ribbon"-driven thick client (Office-like ribbon, customizable menus, context menus, color theming) — dense and heavily configurable. The newer standalone suite (Avaloq Wealth, Engage, Insight) is Gen-3/4 web with conversational AI.

Key screens:

RM Workplace: ribbon toolbar, main-menu tree, report menus/dropdowns, parameter bindings; customizable color theming/fonts/headers. [Avaloq](#)

[↗](#)
Avaloq Engage: conversational messaging app (WhatsApp-style) for RM↔client chat, [The Wealth Mosaic](#)
[↗](#)
notifications, video calls.

Avaloq Wealth: portfolio modeling/rebalancing, advisory proposal screens with embedded compliance.

Order-entry flow: Order capture via RM Workplace forms or generated from portfolio rebalancing; compliance checks embedded in the advisory/proposal path.

Visual evidence:

<https://marketplace.uiopath.com/listings/avaloq-uiopath-free-library> — describes Ribbon UI elements (buttons, pop-ups, status bars, tables) [UiPath Marketplace](#)

[↗](#)
— indirect evidence of the thick-client look.

<https://academy.avaloq.com/catalog/Microsite/89> — RM Workplace customization course (menus, context menus, theming). [Avaloq](#)

[↗](#)
<https://www.avaloq.com/solutions/products/avaloq-engage> — Engage conversational product page.

<https://www.thewealthmosaic.com/vendors/avaloq/avaloq-engage/> — Engage description.

Mobile: Avaloq Engage is the client-facing mobile/social-messaging channel; RM-facing mobility via the Engage app.

AI pattern: Avaloq Engage + Insight ship a **virtual assistant** using NLP/"client intent" detection to suggest next-best-actions, trade proposals, and relevant news inline for the RM. [Avaloq](#)

[↗](#)
Conversational-banking positioning.

3. Temenos Wealth / Transact securities module

UI paradigm: Transact core (formerly T24) securities screens are Gen-1 (deep, form-heavy, parameter-driven green-screen lineage). Temenos Wealth Front Office is a newer Gen-3 configurable workflow web UI with no-code/low-code tooling.

Key screens:

Wealth Front Office: ready-to-use, customizable advisor workflows; portfolio modeling & rebalancing; order capture; embedded compliance checks (MiFID II).

Securities module: trade & post-trade processing, asset servicing across asset classes; order management triggered from rebalancing or manual capture.

Order-entry flow: Orders generated from portfolio rebalancing or manual capture → automatic trigger/execution through flexible order-management process with pre/post-trade controls.

Visual evidence:

<https://www.temenos.com/products/wealth-management/> — Wealth product page.

<https://www.temenos.com/products/wealth-management/securities/> — Securities module page.

https://www.temenos.com/wp-content/uploads/2022/11/WealthSecurities_FactSheet.pdf — Securities factsheet (PDF).

<https://developer.temenos.com/transact-apis> — Transact securities APIs (developer view of data model).

Mobile: Digital channels via Temenos Wealth "Digital" component (client-facing). **AI pattern:** Marketed as "AI-driven" but no shipped conversational copilot in the securities UI found.

4. FNZ platform (adviser & investor portals)

UI paradigm: Gen-3 modular, cloud-native, API-first "FNZ Connect." Digitized adviser workspace + investor portals + mobile app, heavily white-labelled per client (e.g. Virgin, Aviva).

Key screens:

Adviser workspace: CRM, financial planning, portfolio management, execution, custody in one workflow; portfolio creation/monitoring/rebalancing with automated compliance and real-time analytics.

Investor portal/app: consolidated holdings; onboarding/eKYC — FNZ states "our eKYC® process can be 100% automated, with investor identity verification in just 35 seconds," verifying 12,200+ government-issued IDs across 250+ countries/territories.

Central-function tools: model portfolio distribution hub.

Order-entry flow: Advisers rebalance/model → straight-through processing from planning through clearing/custody/settlement; compliance automated in-flow.

Visual evidence:

<https://www.fnz.com/wealth-management-platforms> — Platform overview (workspace description).

<https://www.fnz.com/wealth-managers> — Adviser-facing modules.

<https://www.fnz.com/platform/investor-onboarding> — Onboarding/eKYC flow.

<https://www.thewealthmosaic.com/vendors/fnz/> — Module list (Portfolio Manager, onboarding, post-trade).

Mobile: Investor mobile apps (white-labelled, e.g. Virgin) built with FNZ. **AI pattern:** "AI built into the platform" + "advisor-centric copilots" for meeting follow-ups/productivity (marketing-stage; no shipped-UI screenshots found).

5. Charles River IMS / State Street Alpha

UI paradigm: Gen-2 Windows-native dense OEMS. Single-blotter philosophy (combined OMS+EMS) to avoid switching systems/re-keying. [businesswire](https://www.businesswire.com)

Manager Workbench + Trade Blotter + Compliance modules; customizable via profiles/views. Also "Charles River Anywhere" (web/mobile).

Key screens:

Trade Blotter: unified multi-asset order/execution blotter, real-time market data, order status, exception handling; analytics blotter for TCA.

Manager Workbench: order generation & targeting, asset-allocation & security-selection models, cash management; customizable workspace profiles/views.

Compliance: pre-trade, "as-of", intra-trade, post-execution, batch checks; interactive workflows linking investment & compliance personas; alerts/warnings.

Inventory Hub WebApp framed into the blotter/workbench for liquidity/quotes.

Order-entry flow: Generate orders in Manager Workbench (model/target) → pre-trade compliance evaluation (alerts/warnings) → route from single blotter via the broker-neutral Charles River Network — "a broker-neutral FIX network, providing connectivity to more than 600 trading destinations" (500+ FIX brokers, ~6,000 live FIX connections) → post-trade matching. Compliance interrupts appear as inline alerts/warnings before routing.

Visual evidence:

<https://www.crd.com/solutions/charles-river-ims/> — Product overview.

<https://www.crd.com/wp-content/uploads/2022/07/CharlesRiver-IMS-ComplianceOverview.pdf> — Compliance overview (workflow detail).

https://www.crd.com/wp-content/uploads/2022/12/CRD_Inventory-Hub.pdf — Inventory Hub WebApp (blotter integration).

<https://academy.crd.com/catalog> — Course catalog describing Blotter/Workbench/Compliance screens.

<https://www.trustradius.com/compare-products/bloomberg-terminal-vs-charles-river-ims> — 63 user reviews.

Mobile: "Charles River Anywhere" web/mobile access. **AI pattern:** No shipped conversational copilot found in the front-end (State Street Alpha AI is largely data/ops-layer).

6. Bloomberg AIM

UI paradigm: Gen-2 archetype. Terminal-integrated, ultra-dense dark grids, function-key/command driven (`<GO>` navigation), first introduced 1998. Per Bloomberg's Buy-Side Solutions page, "AIM is used by more than 15,000 professionals in nearly 90 countries at over 900 client firms...to manage more than \$17 trillion in assets." Customizable workspace but distinctly "power-user, not pretty."

Key screens:

AIM blotter / order & allocation tools; electronic trading via FIT (fixed income), FXET (FX), EMSX/TSOX (equities/routing to 2,300+ destinations, DMA, dark pools).

Portfolio Manager Workspace (PM`<GO>`): ideation/model construction + implementation of changes to client portfolios in a single place.

Intraday Market Map: heat-map style visualization of intraday moves/news across industries/regions.

Compliance: pre-trade, post-execution, end-of-day rule building + full audit history.

Order-entry flow: Rebalance/model in PM workspace → pre-trade compliance → order creation/allocation → route to execution venue. Compliance embedded pre-trade; deep Terminal-data integration throughout.

Visual evidence:

<https://www.tradersmagazine.com/uncategorized/traders-order-management-systems-overview/> — Includes an AIM Intraday Market Map screenshot description.

<https://professional.bloomberg.com/products/trading/order-management-system/aim/> — AIM product page.

<https://professional.bloomberg.com/solutions/buy-side/trade-execution/> — OEMS capabilities.

<https://www.watertechnology.com/awards-rankings/7952605> — 2025 award writeup with PM<GO> detail.

Mobile: Bloomberg Anywhere / Terminal mobile (Terminal paradigm on phone), not a distinct AIM app. **AI pattern:** Bloomberg AI features exist in the Terminal broadly; no AIM-specific conversational OMS copilot documented here.

7. Horizon Trading Solutions

UI paradigm: Gen-2/3 professional trading front-end for market-making/agency; multi-asset (equities, options, warrants, futures, ETFs, structured products, digital assets). Real-time Level 1/2 data, "quick click-trading," configurable screens. Strong HK presence (BOCI structured-products RFQ client; HK office).

Key screens:

Market-making dashboard: position per underlying/expiry/instrument in a portfolio hierarchy; net qty, P&L, delta, gamma valued in real time.

RFQ screens: continuous and public/private RFQ-based market making; structured-products RFQ intake (email/messaging → price via pricer → generate response), status monitoring.

OEMS blotter with embedded algo execution strategies; Remote Trading Screens for secure remote access.

Order-entry flow: RFQ received → auto/assisted pricing (built-in vol models or external pricer e.g. Numerix) → response generated → execute/hedge. Click-trading from Level 2 book for on-exchange.

Visual evidence:

<https://www.horizontrading.io/solutions-services/principal-trading-market-making/market-making/> — Market-making/position screens described.

<https://www.horizontrading.io/new-features-spotlight-2/> — Position Management, ETF MM dashboard, Quote Request handling, Remote Trading Screens.

<https://www.horizontrading.io/boci-goes-live-with-horizon/> — HK structured-products RFQ workflow.

<https://www.cmegroup.com/globex/trading-cme-group-products/trading-applications/files/horizon-software-functionality-detail.pdf> — Functionality detail (front-end apps: Automated Trader, Broker, Delta One, Option, Warrant Trader).

Mobile: Handheld/tablet support noted (older CME doc); no modern consumer app. **AI pattern:** None documented (algo/automation via Horizon Extend scripting, not conversational AI).

8. iFAST (FSMOne / iGM / iFAST Central B2B)

UI paradigm: Gen-3 web + mobile wealth platform. B2C (FSMOne/Fundsupermart), B2B adviser (iFAST Central) and adviser-assisted iGM. Product-supermarket look: funds/bonds/stocks/ETFs, watchlists, research. Per iFAST's Business Divisions page, "over 15,300 wealth advisers from more than 980 FA companies, financial institutions, banks and internet companies use the iFAST platform" (group AUA S\$30.62bn as at 30 Sept 2025). Singapore-HQ, HK/SG relevant.

Key screens:

iGM app: self-directed investing + adviser-created transactions for client approval on the same account; watchlists; consolidated holdings; research.

iFAST Central (B2B): investment admin, transactions, research, backroom functions for FA firms/banks.

Bondsupermart: bond info, real-time bond prices, trade.

Order-entry flow: Adviser creates transaction → client approves in-app (adviser-assisted model); or DIY self-directed order. Product financing opt-in flows.

Visual evidence:

<https://play.google.com/store/apps/details?id=com.igmnew> — iGM app (screenshots: watchlist, holdings, transactions).

<https://www.ifastcorp.com/ifastcorp/business/business-divisions.tpl> — B2B/B2C platform descriptions.

<https://www.ifastgm.com.sg/igm/> — iGM adviser-assisted platform.

Mobile: iGM mobile app (approval-based adviser+client model) is the flagship. **AI pattern:** None specifically documented in-UI.

9. Broadridge (Itiviti / NYFIX OMS front-end; BTCS)

UI paradigm: Gen-2/3 sell-side OEMS. Post-Itiviti acquisition = "Broadridge Trading and Connectivity Solutions." Ullink OMS (multi-asset agency), Tbricks (principal/market-making, 300+ customizable apps), NYFIX network/matching ("modern user interface"). Using Glue42 desktop interop to link apps into one seamless workspace.

Key screens:

OMS blotter: high-touch + low-touch workflows, advanced DMA, queuing, pre-trade risk controls, robust search; move orders between venues/strategies in one click; real-time alerts & exception management.

Tbricks: app-based, customizable trading widgets for risk trading/market-making.

NYFIX Matching: FIX-based near-real-time allocation/confirmation/affirmation.

Order-entry flow: Order in blotter → pre-trade risk controls → route via smart order routing/DMA to 200+ venues → exception/alert management; one-click venue/strategy switching.

Visual evidence:

<https://www.broadridge.com/case-study/capital-markets/steubing-ag-streamlines-trading-and-connectivity-through-broadridges-oms> — Workflow detail (one-click order moves, alerts).
<https://www.itiviti.com/> — Product suite (Ullink OMS, Tbricks, NYFIX).
<https://www.watertechnology.com/emerging-technologies/7950719/broadridge-rethinks-the-oms> — Glue42 interop / OMS strategy.

Mobile: Not a focus (institutional desktop). **AI pattern:** Broadridge BondGPT exists elsewhere; not documented in this OMS front-end.

10. Enfusion & Limina (modern cloud-native benchmark)

Enfusion (now "Enfusion by Clearwater"): **UI paradigm:** Gen-3 cloud-native SaaS; single golden dataset front-to-back; customizable layouts across desktop/web/mobile; weekly updates (300+ enhancements/quarter). **Key screens:**

Customizable trade blotters; Level II order book window (double-click a price row to complete a ticket and send); options chain tool; "route multiple orders" ticket (select 2+ orders → apply execution details to all).

[Enfusion](#)

↗

Unified positions/P&L/cash view for PM/trader/back-office. [CWAN](#)

↗

Inline pre-trade compliance (1000s of checks) at point of trade. **Order-entry flow:** Order from portfolio decision (PMS natively connected to OEMS, no handoff) [CWAN](#)

↗

→ inline compliance → route (blotter, order book double-click, or multi-order ticket). Mobile order creation/modify/route on iOS/Android. [Enfusion](#)

↗

Visual evidence:

<https://enfusion.com/oems/> — OEMS page (order book double-click, multi-order routing described).

<https://cwan.com/products/enfusion/> — Product page (factor exposure, mobile/browser).

<https://www.youtube.com/channel/UCe2QySMSI4ETLuOsEWHcnrQ> — Enfusion YouTube channel

(demos). **Mobile:** Full order create/modify/route on iOS/Android. **AI pattern:** Clearwater AI marketed at platform level; no Enfusion OEMS conversational copilot documented.

Limina IMS: **UI paradigm:** Gen-3, fully browser-based; exception-based workflows (automate routine, surface only anomalies); Gen-3 IBOR with live-extract simulation. Praised as "mostly intuitive" in reviews.

Key screens:

Unified trade blotter & entry (equities/ETFs/funds/FI/FX/swaps); multi-portfolio & model rebalancing; leader/follower block orders.

Pre-trade compliance with custom no-code rule builder; intra/post-trade checks.

Exception dashboards: recon breaks, data-quality issues, late/failed imports; Done-for-Day and drift-vs-target tracking. **Order-entry flow:** Raise order (single or multi-portfolio) → pre-trade compliance simulation (effect on positions/cash/compliance, forward-looking) → route to EMS or broker. **Visual**

evidence:

<https://www.limina.com/solutions/order-management> — OMS screens described.

<https://www.limina.com/solutions/overview> — Dashboards/exception workflows.

<https://www.capterra.com/p/254789/Limina-IMS/> — User reviews (usability quotes).

<https://www.getapp.com/finance-accounting-software/a/limina-ims/> — Reviews/overview. **Mobile:**

Browser-based, accessible anywhere (no dedicated native app emphasized). **AI pattern:** Automation-first (exception-based) rather than conversational AI.

11. BlackRock Aladdin / Aladdin Copilot (AI benchmark)

UI paradigm: Gen-2 dense enterprise platform (portfolio/risk/trading) with a Gen-4 conversational overlay. Aladdin Copilot + eFront Copilot = natural-language interfaces embedded across the platform.

Key screens / AI pattern:

Aladdin Copilot: generative-AI assistant embedded across Aladdin, "connective tissue" surfacing answers/insights; permission-dependent; content filtering/guardrails; will not give investment advice or answer outside Aladdin boundaries.

Architecture: supervised agentic (LangChain/LangGraph, GPT-4 function calling) exposing hundreds of domain APIs via natural language; developers register plugins with app-context awareness (which app, what's on screen, loaded portfolios/widgets). Example: a "buying shares" query triggers parallel compliance-limit + available-cash checks.

eFront Copilot: gen-AI for private-markets analytics/visualization. Per *Pensions & Investments* (Dec 14, 2023), "BlackRock has launched a private preview of its first generative AI powered 'co-pilot' for 10 clients of eFront," built on Azure OpenAI and slated to roll out to all ~130 eFront Insight clients in Q1 (announced by Aladdin Client Business head Tarek Chouman).

Aladdin Wealth powers bank offerings (e.g. CaixaBank "Advisory GPS", Standard Chartered myWealth Advisor).

Order-entry relevance: Copilot answers/insights and workflow navigation rather than a redesigned order ticket; interaction is a chat/command surface layered on existing screens (compared publicly to OpenBB's interface).

Visual evidence:

<https://www.blackrock.com/aladdin/solutions/aladdin-copilot> — Copilot product page (UX claims).

<https://www.blackrock.com/aladdin/platforms/products/aladdin-copilot> — Guardrails/security detail.

<https://www.zenml.io/llmops-database/agentic-ai-architecture-for-investment-management-platform> — Architecture + on-screen context detail.

<https://www.microsoft.com/en-us/microsoft-cloud/blog/financial-services/2024/09/30/elevating-investment-management-tech-ai-powered-leadership-from-blackrock-and-microsoft/> — Copilot/eFront Copilot natural-language interface context.

https://x.com/didier_lopes/status/1893318738595729786 — Third-party note that Copilot UI "looks very similar to OpenBB."

Cross-vendor UX complaint themes

Steep learning curve / long training: Charles River, Bloomberg AIM and Avaloq all require multi-day

formal certification courses (CRD Academy 3-day courses; Avaloq Academy) — a signal of inherent complexity, not a casual-use tool.

Rigidity in order creation: Limina reviewers (Capterra/Software Advice) note "occasional issues with robustness" and that "some of the processes are more rigid than expected... particularly with regard to order creation and general OM handling" — even on a modern platform.

Fragmented interfaces / swivel-chair: Vendor messaging itself concedes the incumbent pain: Charles River pitches eliminating "multiple interfaces, fragmented workflows and order staging problems";

[businesswire](#)

↗

Bloomberg AIM cites eliminating the "swivel-chair phenomenon" — implying the baseline experience forces re-keying across systems.

Legacy tech dependence: Ayers GTS web historically required Internet Explorer; Avaloq/CRD are heavy Windows thick clients — dated to modern eyes.

Low mobile maturity (institutional): Most institutional OMS mobile is thin or absent; Enfusion is a notable exception with true mobile order routing.

(Caveat: G2/Capterra/TrustRadius volumes for these institutional systems are thin and some reviews are incentivized; treat individual quotes as directional, not statistically robust.)

Modern design reference — retail/crypto contrast worth borrowing (HK/SG)

Futu/moomoo (Futu Holdings, HK/SG): Widely praised for "clean, professional, highly customizable" [Wall Street Survivor](#)

↗

UI that "embraces information density while maintaining excellent UI design" [Moomoo](#)

↗

— bridging retail simplicity and institutional depth. Level 2 data, multi-chart layouts, options Greeks, paper trading, social "Moo Community" feed, leaderboards. [Vocal Media](#)

↗

Two-app strategy: moomoo (English-first, cleaner) vs Futu (Chinese, power-user). [TradeSmart](#)

↗

Recently added AI stock-analysis features. [Wall Street Survivor](#)

↗

Order entry: fast, few taps.

<https://apps.apple.com/us/app/moomoo-investing-trading/id1440255819> — App Store screenshots (order ticket, options chain, watchlist, community).

<https://www.moomoo.com/community/feed/here-is-a-detailed-breakdown-of-the-trading-and-feature-116689903353861> — UI density praise ("power in your pocket").

<https://www.lowrisktradesmart.org/en/blog/futu-vs-moomoo> — Futu vs moomoo UI contrast (English-first vs Chinese power-user).

Tiger Brokers (Tiger Trade, SG/HK): Modern mobile-first multi-market broker; clean order tickets, watchlists. (Contrast reference.)

Interactive Brokers: Power-dense (GlobalTrader/TWS) — closest retail analog to institutional density; useful for how much complexity a serious user tolerates when defaults are good.

Patterns worth stealing from retail: command-palette/natural-language search bars, notification-driven workflows, one-tap order tickets with +/- steppers, inline mini-charts, social/sentiment overlays, dark-mode-first dense grids that stay legible.

Design implications for reimagining an AI-native OMS

KILL:

IE-era/thick-client, multi-window navigation and module trees (Ayers GTS web, Avaloq RM Workplace ribbon).

Re-keying across OMS/EMS/back-office ("swivel chair").

Modal-heavy, form-first order tickets requiring many fields before any validation.

Training-course-mandatory complexity as a permanent state.

KEEP:

Dense, real-time blotter as the trader's home (Bloomberg/CRD) — density is a feature, not a bug, for pros.

Single golden dataset front-to-back (Enfusion/Limina) so PM→trade→compliance→ops share one truth.

Inline pre-trade compliance at the point of trade (Enfusion/CRD/Limina) — interrupt as an inline alert, never a separate app.

Exception-based dashboards surfacing only anomalies (Limina).

Customizable per-role layouts/profiles (CRD, Enfusion).

LEAPFROG:

Conversational + command-bar as the primary navigation layer (Aladdin Copilot model) — natural-language query that is app-context-aware ("what's on screen, which portfolios loaded") and triggers parallel compliance/cash checks behind the scenes.

Natural-language order entry with agentic pre-checks ("buy 2% MSFT across discretionary mandates, respecting limits") that returns a reviewable, compliance-checked draft ticket.

Notification-driven, mobile-first RM workflows (Avaloq Engage's conversational channel + Enfusion mobile routing as proof points).

Consumer-grade polish at institutional density (moomoo as the aesthetic benchmark).

AI guardrails as first-class UI (Aladdin's permission-dependent, boundary-limited, anti-hallucination framing) — trust surfaced in the interface, not hidden.

Caveats

Most vendor screenshots are gated behind demos/logins; the strongest publicly viewable screens are the Ayers demo page, retail app-store listings (moomoo, iGM), and PDF brochures/manuals listed above.

Vendor product pages describe rather than always show the UI.

"Generation" labels are the author's synthesis for design-reference purposes, not vendor terminology.

AI claims from Temenos, FNZ and State Street are largely marketing-stage; only Aladdin Copilot, eFront Copilot and Avaloq's virtual assistant have concrete shipped-UI evidence.

App-store install counts and iOS baselines were used to infer the "dated" feel of Ayers white-label apps; this is inference, not a sourced reviewer critique.

Figures cited (market shares, user counts, AUA) are vendor self-reported except where attributed to third parties (e.g. *Pensions & Investments*, The TRADE).
